Education

Baldwin Wallace University

December 2021

Software Engineering, Bachelor of Science
Studio Art, Minor

Technical Skills

Java, Python, JavaScript, SQL, HTML/CSS, jQuery, Django, React, Prompt Engineering, REST API development, MuleSoft, Spring Boot, Gravitee, Guidewire ClaimCenter, Gosu/Guidewire Studio, MongoDB, AWS (S3), Git, Jira, Postman, Figma,

Work Experience

Software Engineer — Westfield Insurance, Westfield Center, OH

January 2023 - Present

- Delivered ~20 story points per sprint on average, roughly double the team average of ~10, while maintaining high code quality and low defect rates.
- Selected for a competitive Technical Leadership Growth Group, one of a small group chosen by leadership based on performance and work ethic.
- Built a police report AI summarization tool through prompt engineering within ClaimCenter.
- Mentored a summer intern on development best practices, code review standards, and project execution.
- Migrated core integration infrastructure from MuleSoft to Java Spring Boot and Gravitee, improving system reliability and maintainability.
- Designed and implemented new RESTful API integrations, using Postman for testing and validation.
- Collaborated within a 7-developer team on a large Agile Release Train (ART), using Jira for sprint planning and tracking, Git for version control, and full participation in Scrum ceremonies.
- Built an event-driven GenAI pipeline (Python, ChatGPT API, Kafka, Spring Boot/Gravitee) that automatically summarizes claims documents from FileNet and displays them in ClaimCenter, reducing manual review time for adjusters.

Software Engineer and Designer — Qwickly, Cleveland, OH

July 2021 - January 2023

- Built backend features in Django to integrate with third-party LMS platforms (Blackboard, Canvas, D2L), calling external APIs and persisting data into a SQL database.
- Implemented customer feedback to enhance product features, resulting in a 3x increase in sales within one year.
- Worked with AWS storage services to support data handling for these integrations.
- Led the redesign of user interfaces using Figma, ensuring full ADA accessibility and mobile responsiveness.
- Managed design files and contributed to a cohesive design system used across all company products.
- Collaborated with front-end developers to build reusable components, streamlining development.

Projects

Recipe Book:

- Built a full-stack recipe and meal-planning app (Django REST API, React PWA frontend) with JWT auth, family recipe sharing, and shopping lists auto-organized by grocery category.
- Integrated the Claude API to auto-extract structured recipes (ingredients, steps, tags) from any pasted URL or video link, plus AI-assisted tag suggestions and unit conversion.

UX/UI Research Group, Baldwin Wallace University

- Used Tobii Eye Tracking software to design and conduct experiments which tested the usability of the Baldwin Wallace Library website.
- Recruited participants of varying age and computer knowledge and analyzed data from experiments and delivered feedback and suggestions to the client.

Medical Records Software System, Mission Guatemala

- Part of a four-person team using C# in Visual Studio using .NET framework to create a medical records system to improve the effectiveness of health care delivery in a rural area of Guatemala.
- Conducted remote user-testing and saw a need for a better user experience, completely redesigned the user interface and process flow.
